MAY 1995

RECEIVED

Dear Mr Schieffelin

Listed below are key elements agreed to in our meeting of May 11, 1995 This agreement, as discussed, will be used as the basis for submittal of a revised permit modification request 32 for transferring Resource Conservation and Recovery Act (RCRA) Unit 15B, the 904 Pad, from interim to permitted status In addition, temporary authorization for Tent 7 will be requested in the same request The revised permit modification request will be submitted to your office no later than May 26, 1995 Other meeting participants included Cathy Alstatt and Chris Gilbreath of the Colorado Department of Public Health and Environment, and John Ciucci of EG&G, Rocky Flats Inc

- 1) The existing asphalt on the 904 pad is sufficiently impervious for the pondcrete waste stream as it is currently stored in DCT metal containers with absorbents
- 2) A berm will be installed to provide adequate secondary containment capacity and to control run-on of surface water Cheaper alternatives than those discussed will be pursued
- 3) No inspections are required in addition to the already performed weekly RCRA inspection
- 4) If the spill contingency plan is activated for a spill of pondcrete the requirement of a Professional Engineers certification of cleanup will be modified
- 5) Analytical investigation of the pad surface will be required as part of the RCRA closure process

In addition, prior to submittal of the revised permit modification, information on the run-on control berm will be provided to Chris Gilbreath as it is developed, including a briefing prior to the 26th if necessary Advertisement of the Permit Modification request to initiate the public comment period will begin 7 days after the submittal of the revised permit modification
